

NORA Compliance in Weeks. Architecture Capability for the Future.

Ardoq and Bruhati combine AI-powered Enterprise Architecture with deep NORA expertise to accelerate compliance, strengthen governance, and build a lasting EA capability under Vision 2030.

NORA 2.0-native

DGA-aligned

Built for the Kingdom

THE CHALLENGE

- **Higher NORA 2.0 standards**
Updated governance, maturity, and accountability requirements raise the bar for DGA accreditation.
- **Transformation under time pressure**
Entities must meet NORA while advancing Vision 2030 and modernizing services.
- **Disconnected architecture**
Architecture scattered across spreadsheets and disconnected systems limits visibility and traceability.
- **Reactive compliance**
Static documentation and manual evidence collection make continuous readiness hard to sustain.

THE JOINT SOLUTION

- **NORA-native from day one.** Six domains, mandated artifacts, data templates, and the maturity model, ready to populate.
- **Living architecture.** One connected repository with 100% traceability, automated DGA evidence, and always-current architecture.
- **AI-powered insight.** Surface gaps, reveal dependencies, and speed analysis with AI grounded in enterprise context.
- **One coordinated solution.** Technology, implementation, governance, and support from Ardoq and Bruhati in one offering.

60%

Less manual EA effort

100%

Architecture traceability

Days

To first DGA-ready artifact

WHY ORGANIZATIONS CHOOSE ARDOQ + BRUHATI

01 Built for NORA

NORA-native by design, not a general-purpose EA platform retrofitted for compliance. NORA becomes part of the operating model, not a separate exercise.

02 Accreditation, Sustained

Reach accreditation readiness faster and stay continuously compliant, instead of preparing for each audit from scratch.

03 From Documents to Living Architecture

Replace fragmented documentation with connected, AI-powered EA that keeps architecture current, traceable, and actionable.

04 Global Platform. Regional Expertise.

Pair Ardoq's AI-first EA platform with Bruhati's DGA-aligned methodology, deep NORA expertise, and real-world Saudi public sector experience.

Accreditation is the milestone. Capability is the outcome.

The same Enterprise Architecture foundation that supports DGA accreditation enables AI governance, cloud modernization, application rationalization, and broader Vision 2030 priorities.
